

PROJECT DEVELOPMENT PHASE

PERFORMANCE TEST CASES

Project Name: Metro Ticket Generating System in ServiceNow

1. Objective

The objective of performance testing is to verify that the Metro Ticket Generating System performs efficiently during common ticket-booking operations in the ServiceNow Service Portal.

2. Test Environment

Parameter	Details
Application	Metro Ticket Generating System
Platform	ServiceNow
Environment	ServiceNow Personal Developer Instance
Interface	Service Portal
Browser	Microsoft Edge
Testing Type	Performance Testing

3. Performance Test Cases

Test ID	Test Scenario	Test Steps	Expected Result
PT01	Open Service Portal	Access /sp and open the portal	Service Portal loads successfully
PT02	Open Metro Ticket Catalog Item	Search for Book A Metro Ticket	Catalog item opens successfully
PT03	Load Booking Form	Open the catalog item and wait for all variables to load	All required fields are displayed correctly
PT04	Select Stations	Select Starting Station and Destination Station	Selected values are displayed without errors
PT05	Dynamic Fare Calculation	Enter journey details and passenger count	Fare is calculated automatically

Test ID	Test Scenario	Test Steps	Expected Result
PT06	Change Journey Type	Change Single to Return journey	Fare updates according to journey type
PT07	Payment Mode Logic	Select Payment Mode and observe dependent field	Relevant payment field is displayed/hidden correctly
PT08	QR Code Generation	Complete valid booking details	QR code is generated and displayed
PT09	Submit Booking	Submit the completed booking form	Request is generated successfully
PT10	Request Processing	Open the generated request	Booking details are available in the requested item

4. Test Evidence

Evidence is provided in the Performance Test Results document.
