1. INTRODUCTION

1.1 Project Overview

The **Metro Ticket Generating System** is a digital ticketing solution designed to modernize and streamline the metro travel experience. Built entirely on the **ServiceNow platform**, it leverages the platform's Service Catalog, Flow Designer, and automation capabilities to provide commuters with a seamless ticket booking process.

Passengers can book tickets online by selecting their source and destination stations, journey type (single or return), number of passengers, and preferred payment mode. The system automatically calculates the fare using **Catalog Client Scripts** and generates a **QR-coded digital ticket** that can be scanned at metro station gates for entry.

Beyond ticket issuance, the system ensures that every transaction is securely logged in ServiceNow tables, enabling administrators to monitor usage, track revenue, and analyze commuter trends. This digital-first approach reduces reliance on manual ticket counters, minimizes human error, and enhances the overall efficiency of metro operations.

The project demonstrates how **low-code/no-code platforms** like ServiceNow can be applied to real-world transportation challenges, offering scalability, security, and automation without extensive custom development.

1.2 Purpose

The primary purpose of this project is to **digitize metro ticket booking and issuance** through ServiceNow's ecosystem of tools, thereby creating a faster, smarter, and more reliable commuter experience. Specifically, the system aims to:

- **Enable convenience:** Allow commuters to book tickets anytime, anywhere, without waiting in queues at physical counters.
- **Ensure accuracy:** Automate fare calculation using pre-defined station-to-station pricing logic, eliminating manual errors.
- **Maintain transparency:** Record every booking digitally in ServiceNow tables for auditing, reporting, and analytics.
- **Improve efficiency:** Reduce turnaround time for ticket issuance through automation, ensuring instant QR ticket generation.
- **Enhance scalability:** Provide a foundation that can be extended to support SMS/Email ticket delivery, mobile app integration, and payment gateway connectivity.
- **Support sustainability:** Reduce paper usage by replacing physical tickets with digital QR codes, contributing to eco-friendly operations.

By combining **automation, accessibility, and security**, the Metro Ticket Generating System not only addresses current commuter pain points but also lays the groundwork for future innovations in smart transportation systems.

2. IDEATION PHASE

2.1 Problem Statement

Commuters currently rely on manual, counter-based or physical ticketing systems for metro travel, which leads to long queues, delays, human errors in fare calculation, and inefficient use of station staff. There is no unified digital platform that allows passengers to book metro tickets instantly, calculate fares automatically, and receive a verifiable digital ticket without visiting a counter.

This lack of automation results in:

- **Passenger inconvenience** during peak hours.
- **Operational inefficiency** due to staff dependency.
- **Revenue leakage** from manual errors.
- **Limited scalability** for growing metro networks

2.2 Empathy Map Canvas

Empathy Map: Metro Passenger

Metro Passenger – Digital Ticketing

Empathy map: what they say, think, feel, and do

2.3 Brainstorming & Idea Prioritization

Brainstorming Overview

During the ideation phase, multiple ideas were generated to address passenger pain points such as long queues, manual fare errors, and reliance on paper tickets.

Key Ideas

- Service Catalog Ticket Booking
- Automated Fare Calculation
- QR Code Digital Ticket Generation
- Digital Payment Integration (UPI, cards)
- Admin Dashboard for monitoring and analytics

Reference

https://miro.com/app/board/uXjVHnsmcmM=/?share_link_id=796824267924

Final Selected Ideas

Based on impact and feasibility, the following ideas were prioritized for implementation:

1. Service Catalog Ticket Booking
2. Automated Fare Calculation
3. QR Code Digital Ticket Generation
4. Digital Payment Support
5. Admin Dashboard

Decision: The project focuses on simplifying ticket booking, automating fare calculation, generating QR tickets, and enabling digital payments. Advanced analytics and WhatsApp ticketing are considered future enhancements.

3.REQUIREMENT ANALYSIS

3.1 Customer Journey Map

3.2 Solution Requirement

Software Requirements

- ServiceNow instance with Service Portal & Flow Designer enabled
- Email Notifications, Scheduled Jobs, Client Scripts, Business Rules support
- Modern web browser (Chrome, Edge, Firefox)
- QR Code API integration for ticket generation
- Access Control Lists (ACLs) for security

Hardware Requirements

- Standard desktop/laptop computer
- Minimum 4 GB RAM (8 GB recommended for smooth performance)
- Stable internet connection
- Smartphone (optional) for mobile ticket access
- Metro station gate scanners compatible with QR tickets

3.3 Data Flow Diagram

3.4 Technology Stack

Layer	Technologies Used
Presentation / UI Layer	ServiceNow Service Portal, Service Catalog, HTML, CSS, JavaScript
Application / Business Logic Layer	Catalog Client Scripts, UI Policies, Business Rules, Flow Designer, JavaScript
QR Code / Integration Layer	Service Portal Widget, QR Server API, ServiceNow Scripting
Data Layer	ServiceNow Platform Database, Custom Tables
Security Layer	ServiceNow ACLs, Roles, Authentication, HTTPS
Cloud / Infrastructure Layer	ServiceNow Cloud Platform

4.PROJECT DESIGN

4.1 Problem Solution Fit

The Metro Ticket Generating System addresses common problems faced by metro passengers, including long queues, manual ticket booking, fare calculation errors, and the inconvenience of handling physical tickets. The proposed ServiceNow-based solution digitizes the ticket booking process by allowing passengers to enter their source and destination, select passenger type and ticket quantity, calculate the fare automatically, and receive a digital QR-based ticket through the Service Portal.

The solution reduces manual effort and waiting time by automating ticket creation and fare calculation using ServiceNow Business Rules and Flow Designer. The QR-based digital ticket provides convenient and faster ticket verification at metro stations. Overall, the system aims to provide a simple, efficient, secure, and user-friendly ticketing experience while reducing common errors in the existing manual process.

4.2 Proposed Solution

The proposed solution is a **ServiceNow-based Metro Ticket Generating System** that digitizes and automates the metro ticket booking process. Passengers can enter their source and destination, select passenger type and number of tickets, and receive the calculated fare. The system processes the booking and generates a QR-based digital ticket that can be displayed through the Service Portal for verification.

S.No.	Parameter	Description
1	Problem Statement	Metro passengers may face long queues, manual ticket booking, fare calculation errors, and inconvenience in managing physical tickets.
2	Idea / Solution Description	A ServiceNow-based system that allows passengers to enter journey details, select passenger type and ticket quantity, calculate fares automatically, process bookings, and receive a QR-based digital ticket.
3	Novelty / Uniqueness	Combines automated fare calculation, ticket processing, and QR-based digital ticket generation within a single ServiceNow platform.
4	Social Impact / Customer Satisfaction	Reduces waiting time and manual effort while providing passengers with a convenient digital ticketing experience and faster verification.
5	Business Model / Revenue Model	The project is primarily a prototype and does not directly generate revenue. In a real-world implementation, it could support metro ticket fare collection through digital ticket transactions.
6	Scalability of the Solution	Can be extended to multiple stations, routes, passenger categories, and ticket types. Future enhancements can include payment gateway integration, travel history, notifications, smart-card recharge, and admin dashboards.

4.3 Solution Architecture

The solution architecture defines how the Metro Ticket Generating System components interact within the ServiceNow platform. The passenger accesses the system through the **Service Portal and Service Catalog**, where journey details are entered and validated. **Catalog Client Scripts and UI Policies** manage dynamic form behavior, while **Business Rules and Flow Designer** perform fare calculation and ticket processing. The system stores booking and ticket information in **ServiceNow custom tables**. A **QR Server API** is used to generate the QR code, which is displayed through a Service Portal widget as a digital ticket for verification.

5.PROJECT PLANNING & SCHEDULING

5.1 Project Planning

Stakeholders: Passengers (end users), Station Managers, Metro Operations Team, IT Admins

Execution Phases (Completed):

Phase	Title	Key Activities	Status
1	Requirement Analysis & Planning	Objectives, scope, stakeholder mapping, roadmap	✓ Completed
2	Backend Development	Custom tables, data architecture	✓ Completed
3	UI/UX Development	Service Catalog item, variables, UI Policies	✓ Completed
4	Testing & Security	Client Scripts, ACLs, data integrity checks	✓ Completed
5	Deployment & Documentation	Service Portal deployment, demo, final presentation	✓ Completed

Execution Roadmap (Milestones):

Catalog Form Setup → Fare Logic Script → QR Code Integration → Station Details Mapping → UI Pages → UAT & Deployment

Sprint Approach :

- **Sprint-1:** Service Portal access, booking form, validation, submission
- **Sprint-2:** Fare processing, QR ticket generation, notifications, admin verification

Velocity & Burndown :

- Total Story Points: 43 (Sprint-1: 19, Sprint-2: 24)
- Team Velocity: ~21.5 points per sprint (≈3.58 points/day)
- Burndown Chart: All story points completed by Day-6 in each sprint

6.FUNCTIONAL AND PERFORMANCE TESTING

6.1 Performance Testing

Test ID	Scenario	Result	Status
PT01	Open Service Portal	Portal opened successfully	Pass
PT02	Open Catalog Item	Catalog item opened	Pass
PT03	Load Booking Form	Variables loaded correctly	Pass
PT04	Select Stations	Stations selected successfully	Pass
PT05	Fare Calculation	Fare calculated automatically	Pass
PT06	Journey Type Change	Fare updated correctly	Pass
PT07	Payment Mode Logic	Dependent field worked	Pass
PT08	QR Generation	QR code generated	Pass
PT09	Submit Booking	Request created	Pass
PT10	Request Processing	Booking details displayed	Pass

Observation: All performance scenarios passed; no issues observed.

6.2 User Acceptance Testing (UAT)

UAT ID	Scenario	Result	Status
UAT01	Access booking service	Catalog item opened	Pass
UAT02	Select stations	Stations selected	Pass
UAT03	Select journey type	Single/Return worked	Pass
UAT04	Enter passenger count	Passenger count accepted	Pass
UAT05	Select payment mode	Payment mode logic worked	Pass
UAT06	Fare calculation	Fare calculated automatically	Pass
UAT07	QR generation	QR code displayed	Pass
UAT08	Submit booking	Request created	Pass
UAT09	View request	Booking details displayed	Pass

All UAT scenarios passed; acceptance criteria met. The system is validated and considered acceptable.

8. ADVANTAGES & DISADVANTAGES

Advantages

- Provides faster and streamlined ticket booking through the Service Portal.
- Eliminates long queues at metro stations.
- Automated fare calculation reduces human errors.
- QR-based digital tickets promote eco-friendly, paperless operations.
- Supports multiple payment modes (UPI, Card, Others).
- Enhances passenger convenience with a user-friendly interface.
- Reduces manual effort for station staff and improves efficiency.
- Ensures transparency in fare calculation and ticket generation.
- Secure ticketing with role-based ACLs and encrypted transactions.
- Real-time QR verification improves reliability at station gates.
- Admin dashboard enables monitoring, analytics, and error tracking.
- Scalable solution that can be extended to multiple stations and cities.
- Encourages digital adoption and modernization of metro services.
- Reduces operational costs by minimizing paper and manual processes.
- Improves overall passenger satisfaction and trust in metro services

Disadvantages

- Requires stable internet connection for booking and verification.
- Initial setup and configuration effort is needed.
- Dependency on QR scanners at metro stations.
- Limited offline support if the system is down.
- Basic training required for staff and administrators.

9.CONCLUSION

- The Metro Ticket Generating System successfully automates ticket booking using ServiceNow.
- Manual counter-based processes are replaced with a digital, self-service portal.
- Automated fare calculation, QR-based ticket generation, and secure payment integration improve efficiency.
- The system reduces passenger waiting time, minimizes human error, and enhances commuter satisfaction.
- Overall, the project demonstrates how low-code/no-code platforms like ServiceNow can deliver scalable, real-world solutions.

10.FUTURE SCOPE

- Integration with real payment gateways for live transactions.
- SMS/Email ticket delivery for broader accessibility.
- Mobile app extension for on-the-go ticket booking.
- Advanced analytics dashboard for passenger flow and revenue insights.
- Support for smart-card recharge and travel history tracking.
- Multi-language support for diverse commuter groups.
- Expansion to other transport systems (bus, rail) using the same framework.

11. APPENDIX

Source Code

Source Code 11.1: Fare Auto-Calculation Script (onChange)

```
function onChange(control, oldValue, newValue, isLoading) {
    if (isLoading || newValue == '') {
        return;
    }

    var source = g_form.getDisplayValue('starting_from');
    var destination = g_form.getDisplayValue('going_to');
    var numPassengers = Number(newValue);
    var journeyType = g_form.getValue('type_of_journey');

    if (fares[source] && fares[source][destination]) {
        var baseFare = fares[source][destination];

        if (journeyType == '1') { // Single
            g_form.setValue('amount_for_single_journey', numPassengers * baseFare);
            g_form.clearValue('amount_including_return');
        } else if (journeyType == '2') { // Return
            g_form.clearValue('amount_for_single_journey');
            g_form.setValue('amount_including_return', numPassengers * baseFare * 2);
        }
    } else {
        g_form.clearValue('amount_for_single_journey');
        g_form.clearValue('amount_including_return');
    }
}
```

This script calculates the fare automatically based on source, destination, journey type, and passenger count

Source Code 11.2: QR Ticket Generation Script (onSubmit)

```
1  var metroQrDone = false;
2  function onSubmit() {
3      var sysId = g_form.getUniqueValue();
4      var dummyURL = 'https://example.com/ticket?id=' + sysId;
5      var qrImageUrl = 'https://api.qrserver.com/v1/create-qr-code/?size=250x250&data=' + encodeURIComponent(dummyURL);
6      spModal.open({
7          title: "Your Metro QR Ticket - click Checkout once more to confirm",
8          widget: "metro_qr_widget",
9          widgetInput: { qr_url: qrImageUrl }
10     }).then(function() {
11         metroQrDone = true;
12     });
13     return false; // block only the first Checkout click
14 }
```

This script generates a QR code for the metro ticket and displays it in a confirmation modal.

Dataset Link

Not applicable - the project uses ServiceNow custom tables (u_metro_station_details) populated directly within the instance rather than an external dataset.
